Preventive Equipment Maintenance

HVAC / PLANT ROOMS / FIRE PROTECTION

ABOUT US

TETA Electronic HVAC Supply Company has over 25 years of specialist experience in the supply, sale, installation, commissioning and maintenance of building services equipment.

Risks of Neglecting Preventive Maintenance

Significant failures often begin with small warning signs that go unnoticed without scheduled inspections and preventive service. Routine maintenance helps avoid:

- Higher repair costs and prolonged equipment downtime
- Reduced cooling and heating output with increased energy use
- Deterioration of chillers, cooling towers, fan coils and AHUs
- Lower reliability of mechanical and fire-protection equipment
- Increased risks in hospitals and other critical facilities

Direct Impact on Operating Costs

An organized, engineered maintenance program is more than a corrective measure. Scheduled servicing can reduce unplanned stoppages, energy losses and hidden operating expenses while extending equipment life and improving system availability.

In healthcare facilities, even a short interruption may affect operating rooms, intensive care, inpatient wards and sterile spaces.

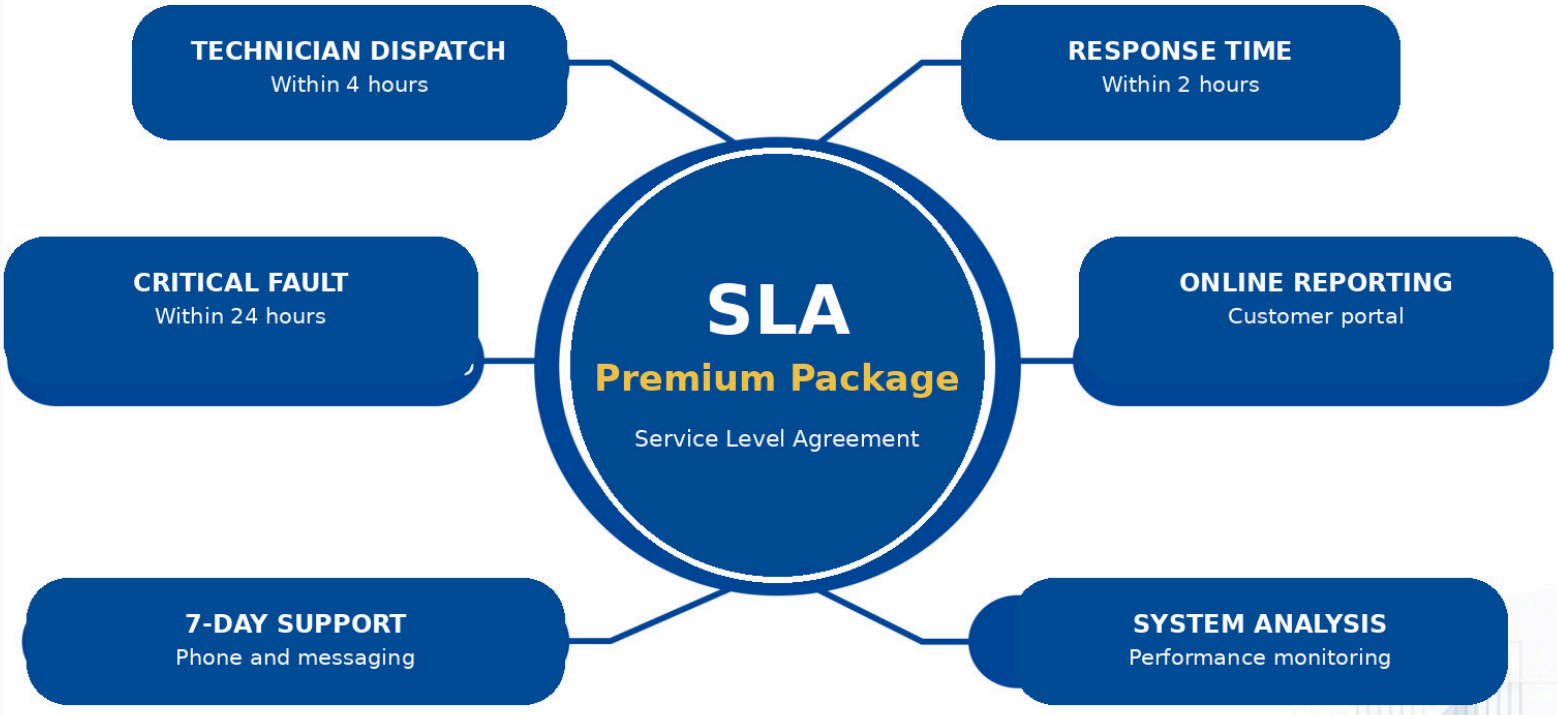

WHY RELIABILITY MATTERS IN HEALTHCARE

In hospitals and clinics, cooling, ventilation, heating and fire-protection systems are essential infrastructure. Precise operation and planned maintenance support patient safety, reliable services and uninterrupted clinical activity.

Recommended Maintenance Services

- Scheduled inspections of chillers and related cooling equipment
- Cooling tower service and heat-transfer performance checks
- Fan coil and AHU cleaning, adjustment and performance monitoring
- Pump, burner and boiler-room servicing
- Fire-protection equipment inspections and safety tests
- Periodic reports, corrective actions and preventive planning

Premium Service Level Agreement

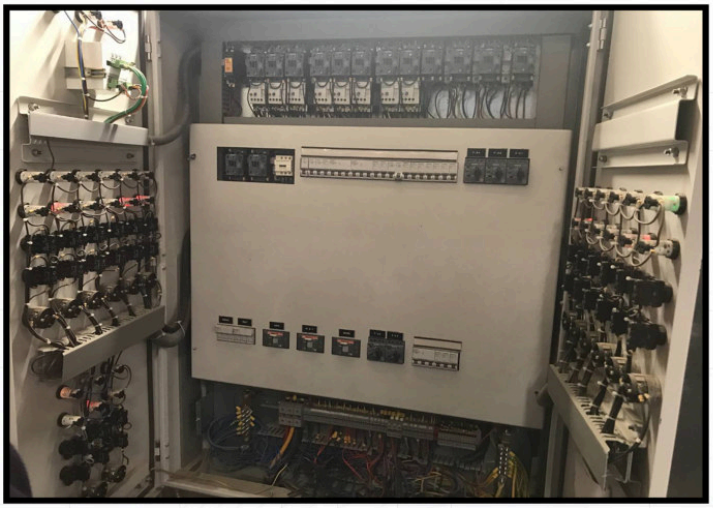

CHILLER

Premium	Plus	Standard	SERVICE DESCRIPTION
✓	✓	✓	Start-up and seasonal changeover
Weekly	Twice monthly	Monthly	Scheduled site visits

TETA CUSTOMER CLUB

The TETA Customer Club is an integrated management platform designed to improve operational transparency, access to service information, and communication with customers.

Contracts, correspondence, operational reports, financial documents, project images and progress updates are stored in an organized digital environment. Notifications keep customers informed when information changes.

Users can review maintenance history, visit reports, service schedules, technical documents, fault alerts and project status throughout the equipment lifecycle.
